## Exhibit 2

### Leverage Incident Management Tools and Reporting

See all Activity Through One Simple Dashboard

Through Rave Alert's incident management dashboard, security can view Rave Guardian Safety Timer sessions, tip submissions, text messages, emergency calls and user locations, and immediately respond.

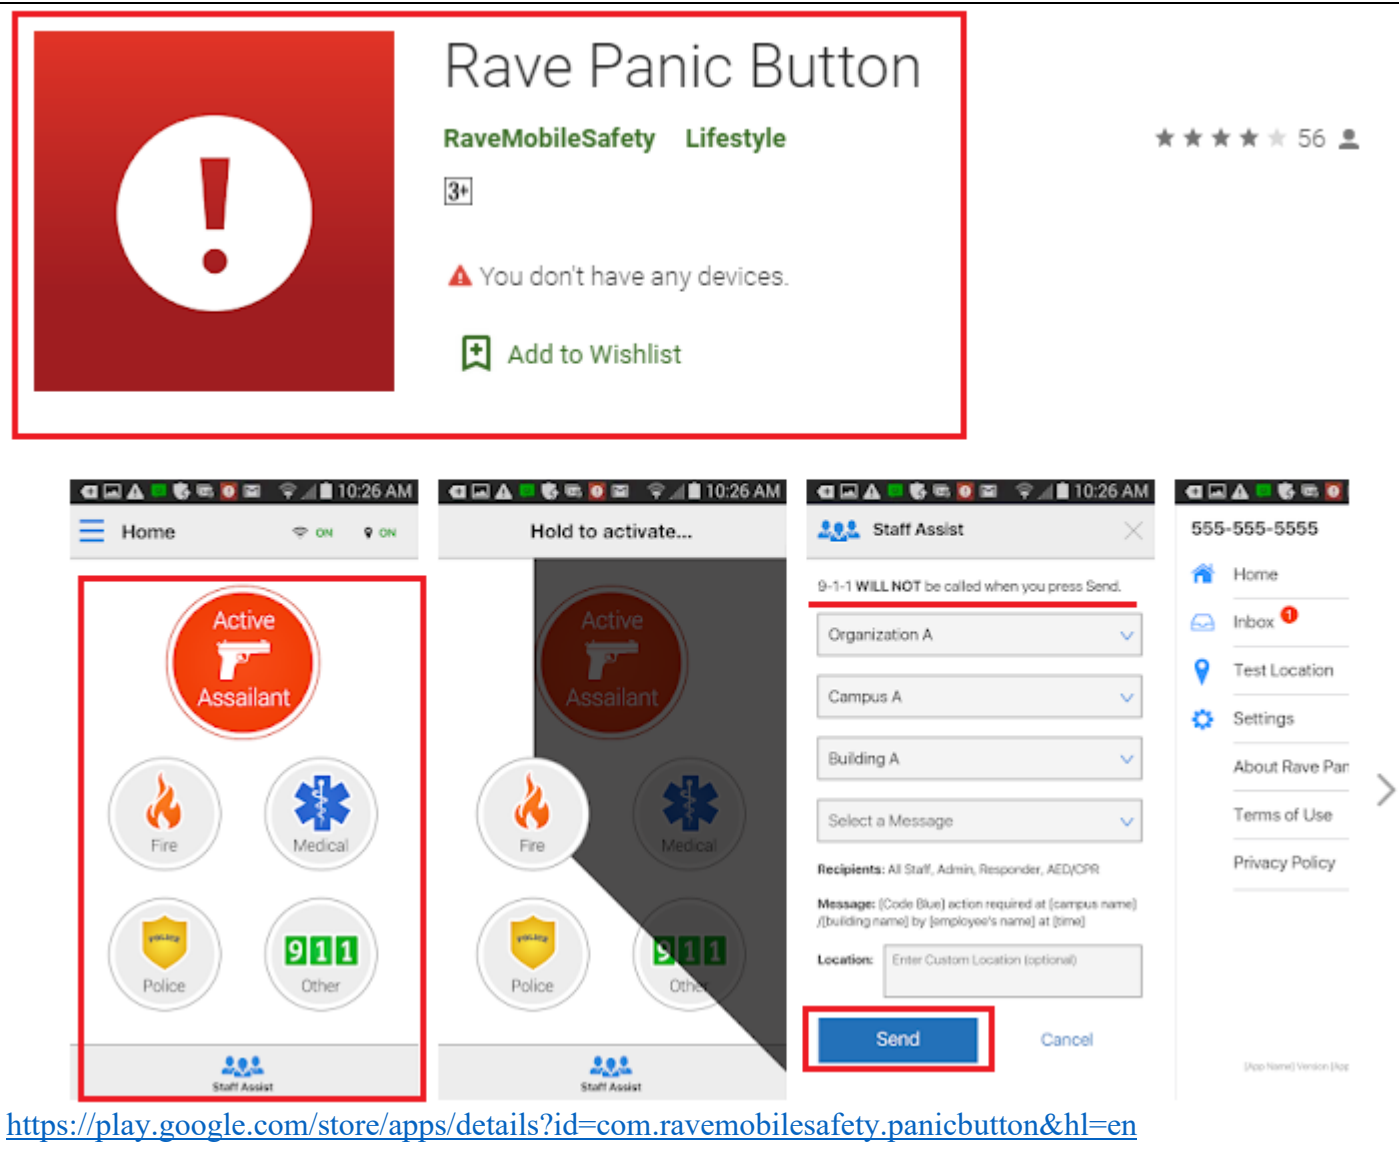

If a user contacts 9-1-1 through the app, your security team will be notified via the incident management console to coordinate any needed response.

Rave Guardian reports provide detailed real-time and historical reporting with key metrics and graphs showing tips, event types over time, and audit trails.

Security can gain insight into areas with repeated activity and develop proactive programs. Reports also establish a record that can be useful in incident management and after-action procedures.

### Setting up your Staff Assist PIN

If you are an "Admin" Campus Contact, you can send Custom Staff Assist messages. Custom messages allow Admins to communicate a unique need, follow up on earlier Staff Assist messages, or even contribute to information disseminated during a Rave Panic Button Incident that involved 9-1-1 (e.g. "All Clear", "False Alarm", "Ambulance has arrived at North entrance").

You need a Staff Assist PIN to send a Custom Staff Assist message. Upon installation, Rave Panic Button prompts "Admin" Campus Contacts to select a Staff Assist PIN through a message in your Inbox. Click the message to select your PIN.

notifying, by the communication network control system, emergency personnel of the indication of the emergency situation;	The accused system practices notifying, by the communication network control system (e.g., Incident Management and Response Dashboard), emergency personnel (e.g., on site emergency personnel and 911) of the indication of the emergency situation (e.g., emergency situation such as weather, criminal activity, fires, and other public safety threats).

## Exhibit 2

Administrators and on-site security are the first to know of an incident and can coordinate a response. With floor plans, the incident type and location provided, on-site responders will have enhanced situational awareness and can respond faster.

Administrators can manage on-going incidents with real-time messages to staff and personnel by sending and receiving accurate updates as events unfold.

## Geo-Targeted Alerts

**Integrated with Rave Alert™ Mass Notification System**

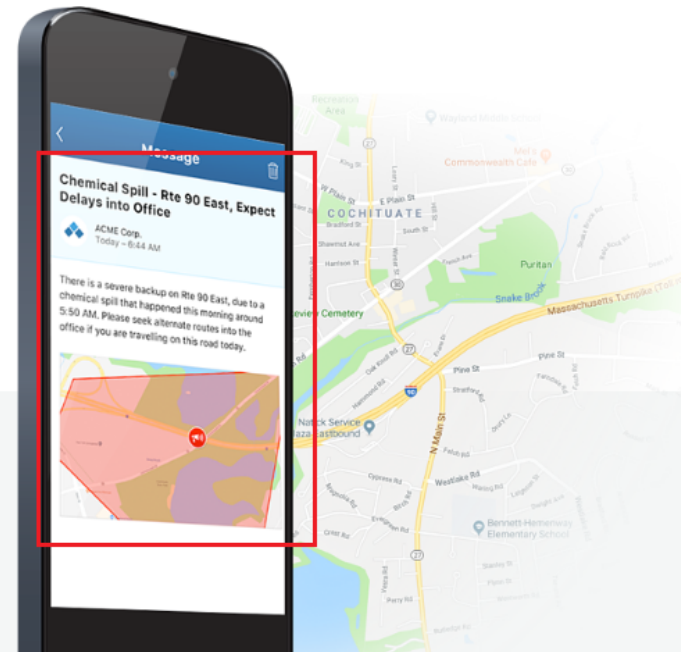

Not every alert requires you to notify your entire community.

If a user is traveling abroad or near a disaster, such as an active shooter, terrorist attack, localized weather threats or other regional hazards, you can identify those specific users and send them a targeted notification through the Rave Alert Mass Notification System.

Once they're identified, you can communicate with them through two-way messaging to determine their status and develop action plans for a coordinated response. If messaging data is down or at maximum capacity, users will still receive push notifications over Wi-Fi.

emergency  
situation.

### CONNECT WITH OTHER SYSTEMS

Communicate intelligently with the widest range of technologies to extend the reach of notifications and data synchronization across systems.

Rave Alert is CAP compliant. It allows integration with a wide variety of emergency systems like sirens and the National Weather Service, RSS to update websites and digital signage, and many other integrations. Rave Alert's batch upload system accepts .CSV files and web APIs for real-time data updates.

## Exhibit 2

Rave Panic Button reduces the time before help reaches you in an emergency.

For critical emergencies, activate one of the five Rave Panic Buttons to dial 9-1-1. When activated at a location configured for your organization, Rave Panic Button also notifies on-site individuals, getting you immediate assistance.

For lower-severity issues not requiring a 9-1-1 call, you can use the Staff Assist feature to notify on-site individuals only. Using Staff Assist will not automatically dial 9-1-1.

When a Rave Panic Button 9-1-1 call is routed to a participating 9-1-1 center, the 9-1-1 call taker automatically receives real-time, critical incident information such as the emergency type, building floor plans, emergency response plans, and other critical details via Rave's patented Smart911 technology.
